

Fostering the Urban food System transformation through Innovative Living Labs Implementation

34 partners from 13 countries

Under the coordination of CARTIF, each of our **12 cities** (with partners from 13 countries) is creating a **Living Lab** with the mission to develop **urban food plans**, responding to the local conditions. Our goal is to achieve an integrated and safe holistic transition towards healthy, sustainable, secure, inclusive and cost-efficient food systems, following the priorities of the EU FOOD2030 policy.

Our 12 Living Labs test and implement innovative actions, placing citizens at the heart of the process and addressing all stages of the food chain:

- production and processing,
- distribution and logistics,
- consumption,
- food loss and waste,
- governance.
